Ho Chi Minh City, Vietnam | (+84) 826 201 679 | vuledinhhoang@gmail.com | [GitHub](#) / [Portfolio](#) | [LinkedIn](#)

SUMMARY

Computer Science student specializing in Computer Vision with project experience in YOLOv8 inference, PyTorch medical-image research, and image-processing pipelines. Built AI services that connect model outputs to usable agriculture and research workflows.

PROJECT & RESEARCH EXPERIENCE

CropVision AI - Crop Disease Detection Platform ([Repository](#)) Ho Chi Minh City, Vietnam
Graduation Project, In Progress - AI platform for crop disease detection and scan management. May 2026
- Present

- Built a YOLOv8 inference service in FastAPI with image validation, bounding boxes, and confidence scores, enabling authenticated crop disease scans.
- Integrated Express.js, JWT, PostgreSQL, and physical image persistence to support scan history and model-result delivery.
- Validated prediction and upload paths with pytest, including file-type and upload-size checks.

WSL-DR - Weakly Supervised Diabetic Retinopathy Grading ([Repository](#)) Ho Chi Minh, Vietnam
Independent research implementation using lesion-aware prompts from image-level labels. Oct 2025 - Dec 2025

- Implemented 5-class grading in PyTorch with EfficientNet-B0 attention, a Swin Transformer backbone, and PRCF feature fusion.
- Developed Grad-CAM lesion-attention maps and interpretability outputs without pixel-level lesion annotations.
- Evaluated model checkpoints with Quadratic Weighted Kappa; the repository records validation QWK 0.6942.

EDUCATION

University of Science, VNU-HCM Ho Chi Minh City, Vietnam
Bachelor of Science in Computer Science, Specialization in Computer Vision Sep 2022 - Jun 2026
(Expected)
GPA: 3.1/4.0
TOEIC: 650 LR – 290 SW
